

Drawing from Geometer's Sketchpad — Windows only

1. Start GSP
2. Create desired construction.
3. Save your construction as a `.gsp` file: e.g., `median.gsp`
4. In addition, save your construction as an Enhanced Metafile `.emf` file
5. Drag this file to the magic icon, which produces a `.PNG` file of the same name
6. Import the `.PNG` file in your \LaTeX file:

```
\includegraphics[width=2in]{GSmedian} % Adjust width as desired
```
